Contextual [Authentic] Cities: An Approach to Observational Urbanism CHARLES WOLFE & TIGRAN HAAS (2018-2020)

Results of the research will be published as a book by: Island Press, Washington DC Develop methodology that can be used to observe, identify and assess local urban context [authenticity] in face of global economic forces and technologies that affect

urban change. Develop an observational approach, survival kit and/or “turn around” protocol that provides tangible best practices to retain, enhance, and/or reclaim local character (history, culture, look/feel, humanistic “intangibles”) in light of economic development, real estate, and technology trends. Potentially formulate a “context [authenticity] index” as a summary expression of identified urban attributes for use and comparison purposes. Synchronicity - A New Approach, Explanation and Theory of Unus Mundis (Deeper Order) Cities TIGRAN HAAS (2019-2021) Results of the research will be published as a book by: Cambridge Scholars Publishing Ltd

Synchronicity is a new paradigm of cities based on the concept, first introduced by analytical psychologist Carl Jung, which holds that events are "meaningful coincidences" if they occur with no causal relationship yet seem to be meaningfully related. Synchronicity provides a new theoretical and practical understanding of urbanism and cities. It does so by reexamining the architecture, urban planning and urban design disciplines relationship to urban space and urban populations and by reframing the current urbanism paradigms and their principles and approaches in a way that by incorporating the city's many elements, signs, patterns, symbols and images as well as assemblages - via meaningful coincidences and a deeper order, imagined for more than a single element by a single approach, where urbanism of cities becomes something else much more powerful, elemental, systemic, wide-ranging;

Strategies of Qualitative Inquiry (Research Methods) Used are:

OBSERVATIONAL URBANISM - MAIN (based in the detailed observation of cities and built environment in general as well as kinetisicm (city in motion – a three-dimensional construct of incremental development) using multiple logics of pattern, coded, phenomenon and diagrammatic socio-spatial knowledge)

GROUNDED THEORY - MAIN (systematic methodology involving the construction of theory through methodic gathering and analysis of data where deduction is based on carefully inducted ideas (through generation of categories, concepts and prepositions) so that the emergence of new theory is enabled)).

INTERNATIONAL RESEARCH CENTRE LEADERSHIP

**(FORMER DIRECTOR of the
Centre for the Future of Places at
KTH)**

Our mission is that Centre for the Future of Places, aside from becoming an International Hub for Research on Public Space & Beyond, doing studies on the subject from a global perspective, also becomes a clearing house for ideas and new proposals on how the cities should be planned, designed, and retrofitted best to meet both today's and tomorrow's challenges with the focus on public places and urban spaces. <https://www.cfp.abe.kth.se/>

The Centre for the Future of Places has been established to promote sustainable urban development by shifting the urban discourse from objects to places in order to promote healthy and livable cities, within the disciplines of Urban Planning and Urban Design. We envision a networked community of leaders actively working across sectors, frontiers, and disciplines to build a more just, sustainable, and prosperous world.

The task of the Centre is to take a holistic approach in defining, classifying and establishing the public space as an independent academic research field. This means that the center will systematically link together knowledge from all disciplines related to the field of public space, such as urban planning, urban design, environmental psychology, urban sociology, architecture, urban economics, human geography and others. The focus on public space will serve as a cross-disciplinary framework to merge the knowledge from the different disciplinary silos; thus creating links between the experts within them, to create a holistic understanding of the city that serves as the basis for practical and effective action, which will require extensive international cooperation.

Urbana och regionala studier med inriktning mot stadsplanering och stadsutformning

Professor Tigran Haas forskning utforskar hur städer formas, inte bara genom sin fysiska struktur, utan också genom stadslivets sociala, tidsmässiga och psykologiska dimensioner. I skärningspunkten mellan stadsplanering och -gestaltning, arkitektur och samhällsvetenskap undersöker hans tvärvetenskapliga arbete hur offentliga rum, bostäder och urban form påverkar välbefinnande, inkludering och rumslig rättvisa. Han har lett och deltagit i ett flertal externt finansierade forskningsprojekt som behandlar centrala urbana utmaningar såsom ensamhet, den åldrande staden, feministisk planering, segregation och platskapande. Dr. Haas har utvecklat innovativa begrepp som tidsmässig urbanism, emergerande platskapande och post-rumslig segregation. Dessa originella teoretiska bidrag omformulerar förståelsen av staden, inte bara som en fysisk miljö, utan som ett levande system av tid, urban minnesbildning och mänsklig samhörighet.

Professor Haas är tidigare föreståndare för Ax:son Johnsons Centre for the Future of Places (CFP), ett av KTH:s mest framgångsrika forskningscentra, samt tidigare chef för laboratoriet Urban Form and Human Behavior (CAL). Han leder idag Urban Rural Lab (URL), en forskningsmiljö med fokus på urban-rurala dynamiker, rumslig rättvisa, hållbarhet och digital innovation, och är även affilierad till Norman B. Leventhal Center for Advanced Urbanism (LCAU) vid MIT i USA. Med över 25 års undervisningserfarenhet i Sverige och internationellt har han författat och varit redaktör för mer än tio böcker och publicerat över 125 vetenskapliga arbeten. Han räknas som en av de ledande internationella rösterna inom samtida urbanism och har byggt upp inflytelserika globala akademiska och policyinriktade nätverk som främjar kritiska, människocentrerade och framtidsinriktade angreppssätt på stadsbyggande..
